Saeid Mohadjer
Fullstack Developer

Freiburg, Germany
saeid@fastmail.fm

Fullstack Developer experienced in designing and building Web Applications, REST APIs, and resilient responsive Websites

SKILLS

- Expertise in developing secure and scalable RESTful APIs with payload validation (JSON Schema) and authentication/authorization (OAuth/JWT)

- Solid knowledge of Object Oriented and Functional Programming paradigms

- Experience in automated testing including Unit and Functional Testing

- Experience in setting up Build Systems and CI/CD pipelines using NPM Scripts and GitHub Actions

- Experience with serverless computing (Vercel's Edge/Serverless Functions, AWS Lambda)

- Experience with headless CMS and Static Site Generation

- Strong knoweldg of Git, experience with different workflows as well as manual conflict resolution in CLI

- Experience in a11y and accessibility auditing and implementing WCAG 2.1 in Websites

- Experience in i18n and support for RTL languages

- Experience in creating interactive animations in SVG as well as 3D modeling and animation

TECH STACK

Frontend

- HTML 9/10
- CSS/Sass 8/10
- JavaScript/ES6 9/10
- TypeScript 5/10
- React 5/10
- Next.js 4/10
- JSON/JSON Schema 8/10
- JWT 8/10
- SVG Animation 6/10

Testing

- Jest 3/10

Backend

- Node.js 8/10
- Express.js 8/10
- MongoDB 7/10
- PHP/Yii 6/10
- MariaDB 6/10
- Apache 6/10
- Contentful CMS 7/10

Tools

- NPM/NPM Scripts 8/10
- Composer 4/10
- Jira 9/10

Libraries/APIs

- Google Maps 8/10
- Handlebars 8/10
- YouTube 7/10

OS

- Mac 8/10
- Windows 7/10
- Linux 5/10

Cloud

- Vercel 8/10
- Render 5/10
- Cyclic 5/10

- Git/GitHub 8/10
- AWS 5/10
- axe DevTools 7/10

WORK EXPERIENCE

- 2013-2023: Freelance Web Developer. During this period I worked closely with designers and backend developers on developing and maintaining responsive Websites and applications for heavy-weight clients such as Roche, Neoperl, Sto, Siedle, Union Investment, among the others.

- 2019-2022: During this period I headed Frontend Development at Recall InfoLink, a US-based market leader in recall industry. We launched a new version of their multi-lingual recall application and reporting system which had originally been built in Flex. In addition to working on UI, I was heavily invovled with integration of frontend with Python/PHP backend.

- 2011-2013: Frontend Developer at Virtual Identity AG, Freiburg, Germany

- 2008-2011: Freelance Frontend Developer, Vancouver, Canada
Webby Honoree for Museum of Vancouver Website, Webby Honoree for University of Toronto Augmented Reality

- 2007-2008: Senior Interactive Developer at B3 Communications Inc., Vancouver, Canada
Outstanding Achievement for Koloa Landing Website

- 2006-2007: Interface Developer at Blast Radius, Vancouver, Canada

PROJECTS

- **Website for Slaven Gluscevic**
Designed and built a Website that allows online registration for tennis training courses and camps. The admin section allows trainer to view registration data, write notes for students, update training schedule, and so on. Registration data is posted to serverless functions which then validate and write to a MongoDB instance as well as sending Email confirmation to registrants and trainer. Static content is stored on GitHub and auto-deployed to Vercel for live hosting.
Visit Website

- **Tournament Oraganizer**
This web app stores and displays results of tournaments. It allows setup and selection of seasons, players' ranking and history, and individual tournament results. Data fetching is done by JavaScript from MongoDB via invoking serverless API endpoints and then injecting fetched data into Handlebars templates to render the views. Basic authentication for admin is implemented via a Vercel Edge middleware.
